Instruction Manual for Weather Proof PDM Kits

The Rear Terminal Minifuse and Relay (RTMR) unit is designed to provide efficient power distribution in a rugged compact form, suitable for applications in marine, construction, agriculture, heavy trucking, and specialty vehicle industries.

This manual is for these PDM kits:

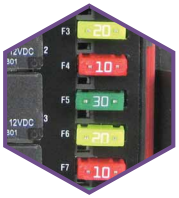
PDMKIT-163T
PDMKIT-164T
PDMKIT-264T
PDMKIT-364T
PDMKIT-404T
PDMKIT-564T
PDMKIT-664T

PDMKIT-264T

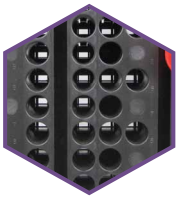
Sturdy weather proof cover.

Options for fuses, relays & breakers.

All component positions are labelled.



Relay options include SPST or SPDT relays



Rust resistant stainless steel studs.

Silicone cover for stud protection.

IP66

Threaded insert for flush panel or bracket mounting.

TABLE OF CONTENTS

INTRODUCTION

This instruction manual covers the following PDM kits:

PDMKIT-163T

RTRM Block (15305-1) with shallow Cover
20 x Mini fuses
10 fuses bussed on the left side
10 fuses bussed on the right side

PDMKIT-164T

RTMR Block (15305-1) with tall cover
20 x Mini fuses / circuit breakers
10 fuses/breakers bussed on the left side
10 fuses/breakers bussed on the right side

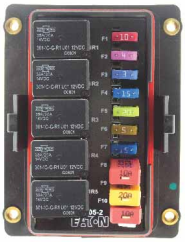
PDMKIT-164T

Mini fuse

Mini circuit breaker

PDMKIT-264T

RTMR Block (15305-2) with tall cover
5 x Micro 280 relays
10 x Mini fuses / circuit breakers
All fuses bussed on the left side
All relays bussed on the right side to coil pin 86

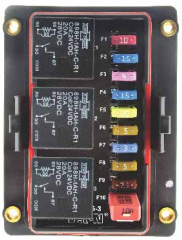


PDMKIT-264T

Micro 280
5 pin relay

PDMKIT-364T

RTMR Block (15305-3) with tall cover
3 x Mini 280 relays or 3 x Micro 280 relays
10 x Mini fuses / circuit breakers
All fuses bussed on the left side
All relays bussed on the right side to coil pin 86



PDMKIT-364T

Mini 280
5 pin relay

PDMKIT-404T

RTMR Block (15305-4) with tall cover
3 x Mini 280 relays or 5 x Micro 280 relays
10 x Mini fuses / circuit breakers
No bussing, all component terminals cabled individually

PDMKIT-564T

RTMR Block (15305-5) with tall cover
3 x Mini 280 relays or 5 x Micro 280 relays
10 x Mini fuses / circuit breakers
All fuses bussed on the left side
No bussing for relays

PDMKIT-664T

RTMR Block (15305-6) with tall cover
3 x Mini 280 relays or 5 x Micro 280 relays
10 x Mini fuses / circuit breakers
No bussing for fuses
All relays bussed to coil pin 86

Stud connects
to internal buss

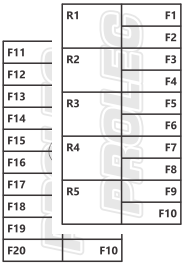
Stud cover
fitted

KIT CONTENTS

The following parts are included in the PDM kit. Fuses and relays must be purchased separately. Whilst a selection of terminals and seals are included in the kit, they can also be purchased separately should more be required.

RTMR block
(fuse block shown, varies by kit)
Qty: 1

Covers
(varies by kit)
Qty: 1



Inner lid label
(varies by kit)
Qty: 1

Medium Size Mounting Bracket
Qty: 1

Bolt & Washer
Qty: 4 of each

Stud Cover
(varies by kit)
Qty: 0, 1 or 2

Terminal (0.8 - 1.0mm²)
AWG #18 - #16
Stamped '17'
Fuse Kit Qty: 5
Fuse/Relay Kit Qty: 10

Terminal (1.0 - 2.0mm²)
AWG #16 - #14
Stamped '15'
Fuse Kit Qty: 20
Fuse/Relay Kit Qty: 35

Terminal (2.0 - 3.0mm²)
AWG #14 - #12
Stamped '13'
Fuse Kit Qty: 5
Fuse/Relay Kit Qty: 10

Green Cable Seal
2.03 - 2.85mm dia. cable
Fuse Kit Qty: 5
Fuse/Relay Kit Qty: 10

Grey Cable Seal
2.81 - 3.49mm dia. cable
Fuse Kit Qty: 20
Fuse/Relay Kit Qty: 35

Blue Cable Seal
3.45 - 4.3mm dia. cable
Fuse Kit Qty: 5
Fuse/Relay Kit Qty: 10

Green Cavity Plug
Fuse Kit Qty: 10
Fuse/Relay Kit Qty: 20

IMPORTANT INFORMATION

Bussmann RTMR blocks are rugged, compact and provide a high level of ingress protection. To ensure the product performs as designed, please install and use the block in accordance with the following requirements.

Input Studs: Some blocks feature one or more input studs which connect to the internal buss. Each stud has a maximum power rating of 80A. It is recommended that cables be a minimum gauge of #10 AWG and fitted with external fuse protection (see pages 18-19). Stud caps should be fitted after cables have been installed.

Terminal Rating: 30A max per terminal.
Terminal Wire Size: #22 - #12 AWG / 0.35mm² - 3mm².

Ingress Protection Rating: IP66-IEC 60529.
To achieve this rating you must fit cable seals to all cables and cavity plugs must be inserted into all empty cavities at the rear of the block. Cover must also be correctly fitted to the unit. Ensure when mounting the unit, all cables exiting the rear of the unit are not bent too tightly to ensure the cable seals will provide the correct seal.

Temperature Rating: -40°C to +125°C (RTMR block only).

CAUTION! Please disconnect the battery before installing the fuse block.

PDMKIT-264T
Front of Panel

5 relays 10 fuses

PDMKIT-264T
Rear of Panel

Stud Cover (Fitted)

Fuse Power Input Stud

Relay Coil Common Stud

Please refer to page 8 for an explanation of studs & internal bus.

Recommended External Fuse Protection
Please refer to page 18.

ASSEMBLY INSTRUCTIONS

Circuit Wiring Information:
Each kit includes a selection of terminals and cable seals to suit different wire sizes.

To achieve the IP protection rating, each cable must be fitted with a cable seal as per these steps;
1. Strip approx. 5mm of insulation from the end of the cable.
2. Insert stripped end of cable through the cable seal.
3. Crimp the terminal onto exposed wire and the cable seal.

Note: the maximum rating of any single output circuit is 30A.

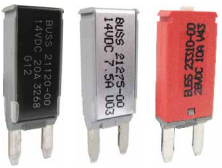
Terminal assembled with cable seal

Inserting the Terminals:
Once the terminal has been crimped onto a cable, insert the terminal into the cavity. Note: the terminal will only lock into the panel when it is oriented correctly during insertion. Once the terminal is locked in place, it will be difficult to remove the cable from the panel. A terminal extraction tool may be required.

Using the Cavity Plugs:
Cavity plugs are provided with the kit for the purpose of sealing any unused cavities at the rear of the block. This is required to achieve the IP protection rating. Additional packs of cavity plugs can be sourced from your local Prolec distributor.

Selecting Plug-in Components:
This panel is designed for ISO 280 style components that feature 2.8mm blade terminals on 8.1mm centerline spacing. Prolec sell a wide range of fuses, circuit breakers, micro relays & flashers to suit;

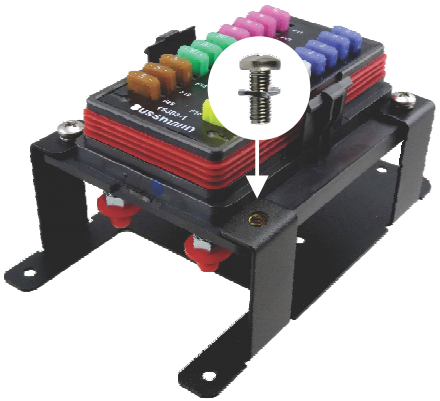
Minifuse



Mini bladed breakers
(auto / modified / manual reset)

Micro Relay
(4 pin - N/O)

Micro Relay
(5 pin -SPDT)



Attaching RTMR block to the bracket:
Each PDM kit contains 4 x bolts and lock washers to screw the bracket onto the block.

1. Position the block so that it is under the 4 mounting holes on the bracket.

2. Screw each bolt and lock washer into the threaded insert on the panel. Refer to diagram (left). Note: the threaded inserts may be a tight fit when screwing in the bolt for the first time.

FUSE SELECTION

Selecting the Correct Fuse / Circuit Breaker Ampere Ratings:
If you are replacing an existing fuse panel, you can use the same fuse ratings as before. If you are adding new accessories, you should consult the specifications provided with the accessory for further information.

The following is a list of fuse ampere ratings used for common accessories;

5A Fuse
- Licence plate light
- Interior light

10A Fuse
- Reverse switch/lights
- Radio
- Daytime running lights
- Turn signals

15A Fuse
- Cigarette lighter
- Wipers
- Fuel pump
- Hazard Flasher

20A Fuse
- Power windows
- Dual horn
- Sunroof
- Fresh air blower

30A Fuse
- Trailer socket

Warning: The above fuse ratings are provided as a guideline only. It is strongly recommended to consult the specifications supplied with the accessory when selecting a fuse rating to protect the device. Using the wrong fuse may result in damage to the device, cabling or cause a fire.

RELAY LAYOUT OPTIONS

Relays & Flashers can be installed in the following kits as illustrated.

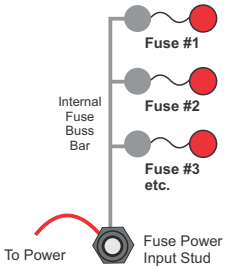
INTERNAL BUSSING EXPLAINED

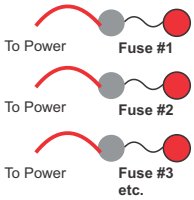
Fuse Bussed RTMR Units

The following kits feature an internal fuse bus; PDMKIT-163T, 164T, 264T, 364T & 564T.
The internal fuse bus feeds power to all 10 fuses from an input stud on the underside of the block.
This reduces the number of terminals, cable seals, cavity plugs and wiring required to assemble the unit. It is also a great time saver. The only disadvantage of using a common power bus is that you cannot power individual fuses from alternate power sources eg. 5 fuses powered directly from battery and 5 fuses powered from ignition power.

RTMR with internal Fuse Bus



RTMR without internal Fuse Bus

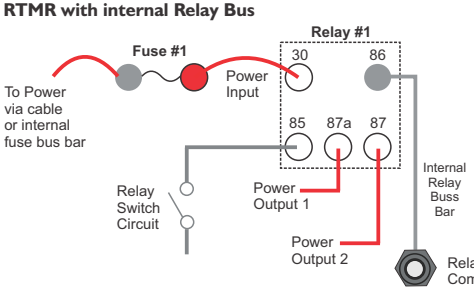


As you can see in these illustrations, the RTMR unit with no internal fuse bus requires an input power cable for every fuse, whereas the RTMR unit with an internal fuse bus only requires 1 power input cable.

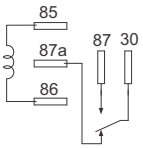
Relay Bussed RTMR Units

The following kits feature an internal relay bus; PDMKIT-264T, 364T & 664T.
The internal relay bus provides a common power or common ground circuit to relay coil pin 86.
There is a common misconception that relay pin 30 (power input) is connected to the relay bus.
This is NOT the case. Power to relay pin 30 should be supplied from a fuse to ensure that the accessory is fuse protected. as shown below, relay pin 30 should be connected to a fuse on the RTMR using a jumper cable.

RTMR with internal Relay Bus



Relay Pin	Description
85	Relay coil power
86	Relay coil power
30	Power input
87	Power output N/O
87a	Power output N/C

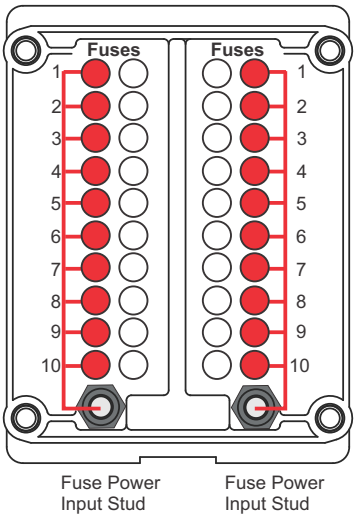


Relay Circuit Diagram

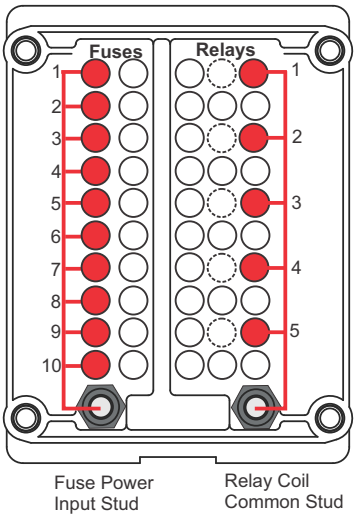
As you can see in the above illustration, relay coil pin 86 is connected to the internal relay bus bar.
Relay common pin 30 is connected to a fuse on the RTMR block using a jumper cable.
Depending on how you wish to switch the relays, the relay coil stud can be connected to either positive or ground. However, if the relay is diode protected, it can only be wired in one configuration that will be determined by the polarity of the diode.

INTERNAL BUSS DIAGRAMS

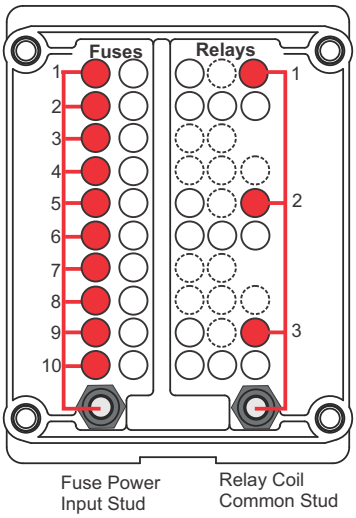
PDMKIT-163T & PDMKIT-164T



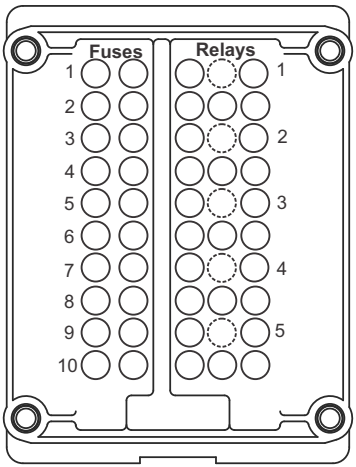
PDMKIT-264T



PDMKIT-364T

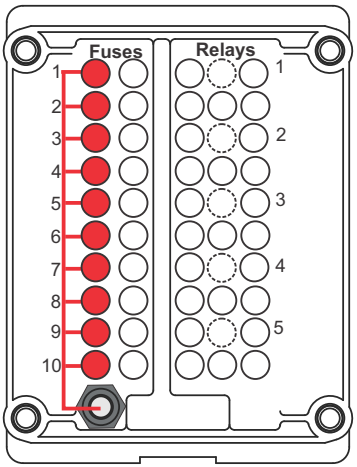


PDMKIT-404T



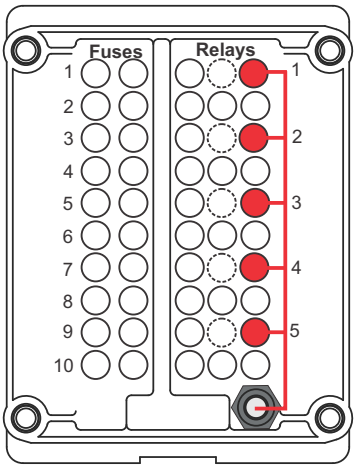
Please refer to next page for more information

PDMKIT-564T



Fuse Power Input Stud

PDMKIT-664T



Relay Coil Common Stud

Part Number	Nbr of Cavities	Max Nbr of Terminals
PDMKIT-163T	20	20
PDMKIT-164T	20	20
PDMKIT-264T	35	30
PDMKIT-364T	35	22
PDMKIT-404T	50	45
PDMKIT-564T	40	35
PDMKIT-664T	45	40

No Cavity, bussed connection
Cavity to fit a terminal
Empty cavity (no terminal)

Important Note:
To achieve the ingress protection rating (IP66-IEC 60529), you must fit cable seals to all cables and cavity plugs must be inserted into all empty cavities at the rear of the block. Cover must also be correctly fitted to unit. Ensure when mounting the unit that all cables exiting the rear of the unit are not bent too tightly to ensure the cable seals will provide the correct seal.

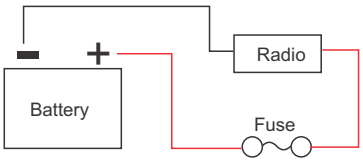
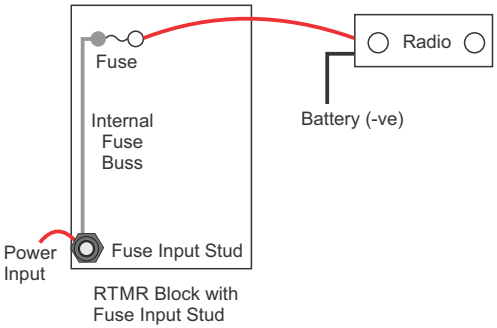
SAMPLE FUSE CIRCUIT



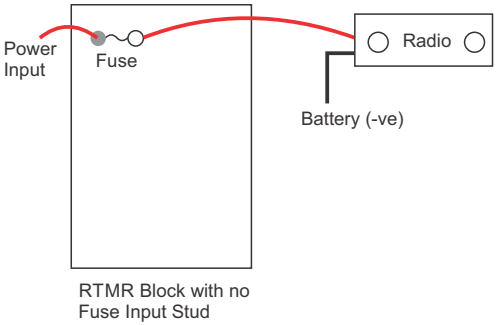
Sample Circuit:
In this example, we will be using the RTMR block to power a radio as per this circuit diagram.

Example 1. Using an RTMR block that features an input stud:
This example shows how to use an RTMR block that has an input stud for 10 fuses.
The input stud provides power from a single cable to all fuses on the same side which saves wiring.



Steps.
1. Connect power from the battery (+ve) to the fuse input stud on the block.
2. Connect a cable from an unused fuse position on the block to the radio power input cable (+ve).
3. Connect the radio (-ve) cable to the battery (-ve).
4. Insert the appropriate fuse into the block to complete the circuit. The fuse protects this circuit from overloads.

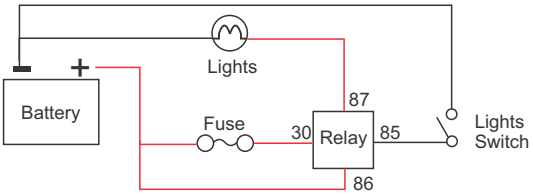
Example 2. Using an RTMR block with NO input stud:
This example shows how to use an RTMR block which doesn't have an input stud for the fuses.
As there is no input stud, each fuse requires input power from a separate cable.
The advantage is that you can provide power from different sources to different fuses.
Fuses have no polarity so you can connect power to any side of the fuse.



Steps.
1. Connect power from the battery (+ve) to an empty fuse position on the block.
2. Connect a cable into the empty cavity directly beside the power input cable, then connect the other end of this new cable to the radio power input cable (+ve).
4. Connect the radio (-ve) cable to the battery (-ve).
5. Insert the appropriate fuse into the block to complete the circuit. The fuse protects this circuit from overloads.

SAMPLE FUSE / RELAY CIRCUIT (NEGATIVE SWITCHING)

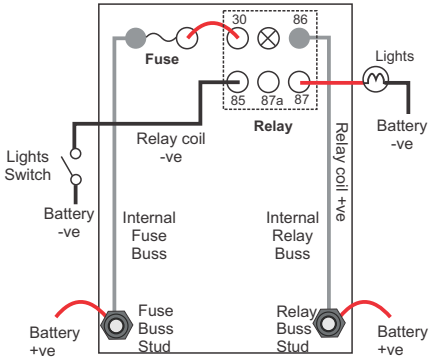
Sample Circuit 1 (Negative Switching):
We will be using an RTMR fuse/relay block to power lights using a fuse and relay fitted in the block and a seperate dash mounted light switch. In this example we have connected the dash mounted light switch to the negative battery terminal.



Relay Connections:
30 - Lights +ve power input via fuse
87 - Lights +ve power output
86 - Relay +ve coil power
85 - Relay -ve coil power

Wiring Example 1.
RTMR block with 2 input studs.

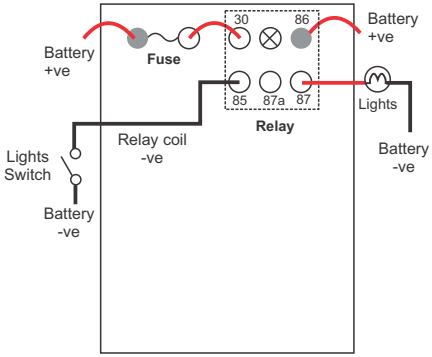
⊗ = Open hole, no connection.



RTMR Block with 2 Input Studs

Wiring Example 2.
RTMR block with NO input studs.

⊗ = Open hole, no connection.

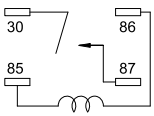


RTMR Block with NO Input Studs

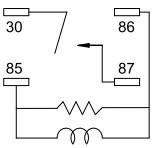
Wiring Explanation.
In this simple example we are switching lights on/off using a dash mounted light switch. The circuit is fuse protected and power to the lights is switched by a normally open relay.

How the Circuit Works.
When we switch the lights ON at the dash, power flows from relay coil (pin 86) to relay coil (pin 85) and out to GROUND via the lights switch on our dash. When the relay coil is energised it allows power to flow from the fuse (via a jumper cable) to relay pin 30 and out relay pin 87 to power the lights.

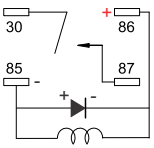
Suitable Relays for this Circuit:



No Protection



Resistor Protection



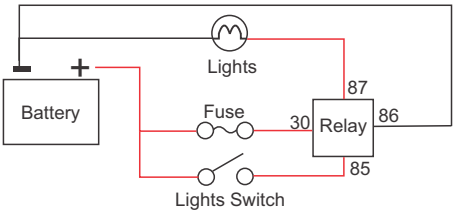
Diode Protection
Anode to pin 85

When energizing the coil of a relay, polarity of the coil does not matter unless the relay is diode protected.

When a relay is diode protected, you must connect the positive voltage to the correct terminal of the relay coil as illustrated in the diagram.

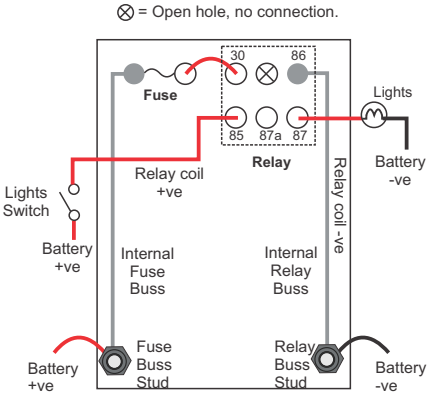
SAMPLE FUSE / RELAY CIRCUIT (POSITIVE SWITCHING)

Sample Circuit 1 (Negative Switching):
We will be using an RTMR fuse/relay block to power lights using a fuse and relay fitted in the block and a seperate dash mounted light switch. In this example we have connected the dash mounted light switch to the positive battery terminal.



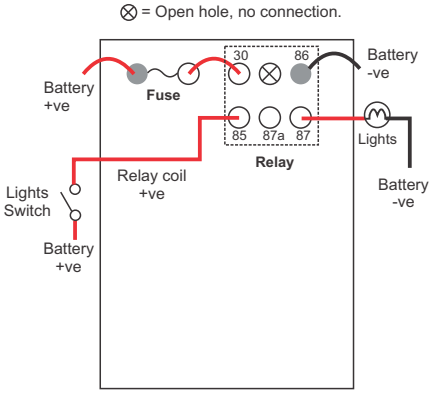
Relay Connections:
30 - Lights +ve power input via fuse
87 - Lights +ve power output
86 - Relay -ve coil power
85 - Relay +ve coil power

Wiring Example 1.
RTMR block with 2 input studs.



RTMR Block with 2 Input Studs

Wiring Example 2.
RTMR block with NO input studs.

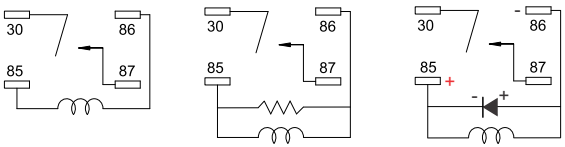


RTMR Block with NO Input Studs

Wiring Explanation.
In this simple example we are switching lights on/off using a dash mounted light switch. The circuit is fuse protected and power to the lights is switched by a normally open relay.

How the Circuit Works.
When we switch the lights ON at the dash, power flows from the switch to relay coil (pin 85) and out relay coil (pin 86) to GROUND. When the relay coil is energised it allows power to flow from the fuse (via a jumper cable) to relay pin 30 and out relay pin 87 to power the lights.

Suitable Relays for this Circuit:



When energizing the coil of a relay, polarity of the coil does not matter unless the relay is diode protected.

When a relay is diode protected, you must connect the positive voltage to the correct terminal of the relay coil as illustrated in the diagram.

FLASHER RELAY CIRCUITS

Using Flasher Relays in the RTMR.
Flasher relays are typically used to create the on/off flashing effect for turn signals and hazard lights. These relays can easily be installed in the RTMR. Only one flasher relay is required to create both a turn signal & hazard light circuit. There are however, a number of different ways a flasher relay can be wired. Regardless of the method you choose, it is recommended you do NOT use an RTMR that features internal relay bussing. The flasher relay can be installed in 2 different orientations, so please be mindful of this when designing your installation or replacing the relay.

Choosing which RTMR to use for the flasher circuit.
It is recommended you use 2 fuses for your flasher circuit. The first fuse is used to protect the turn signal circuit (which powers the turn signal lights on one side of the vehicle). The second fuse is used to protect the hazard light circuit (which powers the turn signal lights on both sides of the vehicle simultaneously). In most modern vehicles, the hazard lights will operate even if the ignition is OFF, however the turn signals will only operate when the ignition is switched ON. To achieve this functionality, we recommend you use the PDMKIT-404T with no internal bussing. However if you do not need this exact functionality, then you can also use the PDMKIT564T with internal fuse bussing.

Choosing which flasher to use.
Only flashers that feature ISO280 terminals can be used in the RTMR. We offer a range of flashers to suit the RTMR. When selecting the flasher, you need to consider the following;
1. Is the flasher powering LED turn signal lamps or conventional lamps?
2. Do you prefer a flasher with 3 or 4 terminals?
3. How many lamps will the flasher be operating?

Flasher Relays (LED lamps)

NO-762-LED

QR Code: 9023

Flasher Relays (conventional lamps)

Scan this QR Code for more information

NO.761

QR Code: 9024

Note: These flasher relays have a similar component footprint to a Mini Relay (26.4mm x 26.4mm).

Selecting a Hazard Lights Switch.
Selecting a suitable hazard light switch is important, particularly if you wish to power the flasher circuit using 2 different fuses as recommended. The following switch can be wired to 2 different fuses and is suitable for use with both 3 and 4 terminal flashers.

Hazard Lights Switch

Scan this QR Code for more information

QR Code: 9029

GENERAL SPECIFICATIONS & DIMENSIONS

Components: Accepts Mini fuses, Mini bladed circuit breakers, Mini 280 relays & Micro 280 relays and 280 Flashers. All components must have 2.8mm blades on 8.1mm centerline spacing.
Mounting: Threaded inserts #10-32 as standard, (M5 optional).
Panel Mounting SS Hardware: Screw #MT1032PPHS.
Washer # SW316S.
Block & Cover: Black thermoplastic featuring tether & silicone seal.
Internal Buss: Tin-plated copper (bussed versions only).
Input Studs: M6 stud nickel plated brass (bussed versions only).
Input Stud Rating: 80A max.
Output Terminal Rating: 30A max per terminal.
Wire Size: #22 - #12 AWG / 0.35mm² - 3mm².
Cover Options: Replacement covers also available.
Shallow cover with Gore vent (Mini fuses only)
B151-7168-1-J
Deep cover (Mini fuses / breakers / 280 relays)
B151-7168-2-J
Ingress Protection Rating: IP66-IEC 60529.
Valid when properly installed with cover, cable seals and cavity plugs.
Cavity Plugs: Required to fill all unused output cavities for ingress protection.
Cable Seals: Please check the overall diameter of your cable before ordering cable seals.
Temperature Rating: -40°C to +125°C (PDM only)
Ordering: Block is supplied with tethered cover. Bussed versions also include one nut and silicone stud cap for each buss input stud.
Not Included: Terminals, cable seals, cavity plugs, mounting brackets or mounting screws. Module does not include any plug-in components such as fuses, circuit breakers or relays.

Protect your RTMR fuse block by adding a fuse between the battery and the RTMR input stud.

OPTION 3.

Midifuse Fuse Block

Part Number	Description
MIDFBB	Midifuse block, 32V, 125A max
LMI1-E-1-0	Midifuse block, 32V, 200A max stackable

MIDFBB

LMI1-E-1-0

(Fuses are not included)

Midifuses

Part Number	Ampere Rating
MID023-32V	23A ^
MID030-32V	30A ^
MID040-32V	40A
MID050-32V	50A
MID060-32V	60A
MID070-32V	70A
MID080-32V	80A
MID100-32V	100A

Element Window Side

Solid Side

Note: When selecting a fuse, please remember that each RTMR input stud is rated at 80A max.

OPTION 4.

Battery Fuse Bars (1 or 2 pole)

Part Number	Description	Stud	Cover
CFBAR1SP-KIT	Single pole kit	1/4"-20	Red
CFBAR1SP-KITB	Single pole kit	1/4"-20	Black
CFBAR1M8SPRK	Single pole kit	M8	Red
CFBAR1M8SPBK	Single pole kit	M8	Black
CFBAR2M8SPRK	Double pole kit	M8	Red
CFBAR2M8SPBK	Double pole kit	M8	Black

Bar Rating: 300A max at 58VDC (or less).
Note: All kits include S/S nuts & washers, cover.

CFBAR1 (Single Pole)

CFBAR2 (Double Pole)

NEW

Ratchet Terminal Crimp Tool

Features:
- Quickly change between different jaw sets.
- Ratchet mechanism with automatic quick release.
- Parallel jaw design eliminates terminal rocking.
- Crimps terminal and seal in one press.

CT-JA18B pictured with jaw set inserted

Part Number	Description
CT-JA18B	Extracts Delphi Metri-Pack 280 terminals & other types

Kit Includes
Quick change ratchet crimper tool (8.7") 220mm
H6 Jaw set to suit: (#22 / 20-18AWG) 0.35 / 0.5-0.8mm²
H7 Jaw set to suit: (#16-14 / 12AWG) 1.0-2.0 / 3.0mm²

Terminal Removal Tool

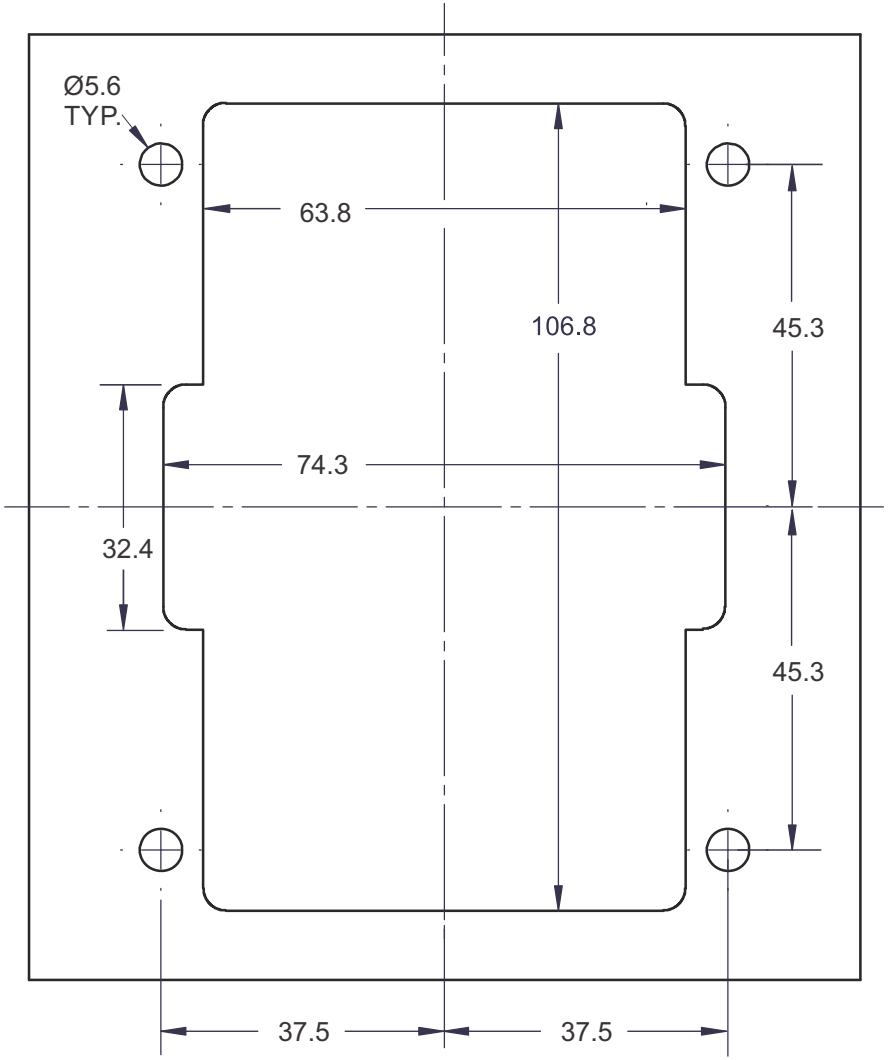
PANEL CUT-OUT SCHEMATIC

Bussmann RTMR blocks can be mounted directly to a panel thereby eliminating the need for a bracket. Use the following template to cut a hole in the panel and fit the RTMR from behind the panel. The 4 fixing bolts are inserted to the front of the panel and screw into the threaded inserts of the RTMR to keep it in place. The cover can still be used as normal.



Recommended Panel Cut-Out (Scale 1:1)
