

RTMR ORDERING OPTIONS

There are many different ways to order the RTMR block and matching accessories. You can buy individual parts separately so you can 'mix & match' to suit your exact requirements, or you can buy a Prolec RTMR kit that includes many of the parts you need.

1 Select the RTMR Block

20 Fuse Block

10 Fuse / 5 Relay Block

2 Select the mounting & wiring accessories

Pre-Wired Terminals & Jumpers (p.5)

Terminals, Cable Seals & Cavity Plugs & Tools (p.4)

Terminal Crimp Tool (p.5)

Bracket Options (p.6)

Terminal Removal Tool (p.5)

OR Alternatively, select one of our RTMR kits.

All Kits Include The RTMR Block, Cover & Brackets.

RTMR Kit With Pre-assembled Cables

RTMR Kit With Loose Terminals & Cable Seals.

i Refer page 10 for more information on these products.

3 Select the electrical components

Mini Fuses Regular or Indicating

Mini Fuse Assortment Clamshell Packs

i Refer pages 7 & 8 for more information on these products.

ISO 280 Relays (Micro / Mini) Normally Open SPST (4 pin) Change Over SPDT (5 pin)

Mini Circuit Breakers (Auto, Manual, Modified Reset)

Mini Blade Resistors or Transistors

NEW

ISO 280 Flasher Relays

MINI FUSE, MINI / MICRO RELAY SEALED MODULES

NEW IP66

The sealed Rear Terminal Mini fuse and Relay panel (RTMR) is designed to provide efficient power distribution in a rugged compact form. Suits applications in marine, construction, agriculture, heavy trucking, specialty vehicles and 4x4 wheel drives. I5305 improved components are backward compatible and interchangeable with the I5303 series.

Components: Accepts Mini fuses, Mini bladed circuit breakers, Mini 280 relays & Micro 280 relays and 280 Flashers.
 All components must have 2.8mm blades on 8.1mm centerline spacing.
Mounting: Threaded inserts # 10-32 as standard, (M5 optional).
Panel Mounting SS Hardware: Screw #MT1032PPHS.
 Washer # SW316S.

Block & Cover: Black thermoplastic featuring tether & silicone seal.
Internal Buss: Tin-plated copper (bussed versions only).
Input Studs: M6 stud nickel plated brass (bussed versions only).
Input Stud Rating: 80A max.
Output Terminal Rating: 30A max per terminal.
Wire Size: #22 - #12 AWG / 0.35mm² - 3mm².
Cover Options: Replacement covers also available.
 Shallow cover with Gore vent (Mini fuses only) # B151-7168-1-J
 Deep cover (Mini fuses / breakers / 280 relays) # B151-7168-2-J
Ingress Protection Rating: IP66-IEC 60529.
 Valid when properly installed with cover, cable seals and cavity plugs.
Cavity Plugs: Required to fill all unused output cavities for ingress protection.

Cable Seals: Please check the overall diameter of your cable before ordering cable seals.
Terminal Tools: Terminal crimping & removal tools see page 5.
Temperature Rating: -40°C to +125°C (PDM only)
Ordering: Block is supplied with tethered cover. Bussed versions also include one nut and silicone stud cap for each buss input stud.
Not Included: Terminals, cable seals, cavity plugs, mounting brackets or mounting screws. Module does not include any plug-in components such as fuses, circuit breakers or relays.

**I5305-1-x-x
20 x Mini Fuse
Dual Bus**

**I5305-2-x-x
5 x Micro Relay
10 x Mini Fuse**

**I5305-3-x-x
3 x Mini Relay
10 x Mini Fuse**

MODULE & COVER OPTIONS:

Note: Includes stud cap(s) if bussed.

Part Number	Block Layout	Bussing	Included Cover	Nbr of Cavities	Max Nbr of Terminals
I5305-1-6-3	20 x Mini Fuses (10 Mini Fuses per side).	Dual Fuse Buss	Shallow	20	20
I5305-1-6-4	20 x Mini Fuses / Circuit Breakers (10 Mini Fuses / Breakers per side).	Dual Fuse Buss	Deep	20	20

RTMR PRE-ASSEMBLED KITS

20 Minifuse Block Kit (with cables)

Part Number
PDMKIT001

Description

This kit can supply fused power for up to 20 output circuits fed by 2 input power leads connected to the rear studs of the block. Each input stud supplies power to 10 circuits (1 side). This kit includes the block & cover, 35 x assorted Minifuses, 20 x pre-terminated cables, 10 x cavity plugs, 20 x butt connectors and 2 x mounting brackets.

20 Minifuse Block Kit (with terminals)

Part Number
PDMKIT004

Description

This kit can supply fused power for up to 20 output circuits fed by 2 input power leads connected to the rear studs of the block. Each input stud supplies power to 10 circuits (1 side). This kit includes the block & cover, 35 x assorted Minifuses, 20 x terminals, 20 x cable seals, 10 x cavity plugs and 2 x mounting brackets.

10 Minifuse/Circuit Breaker & 5 Relay Block Kit (with terminals)

Part Number
PDMKIT002

Description

This block can be fitted with a combination of up to 10 Minifuses or mini-bladed breakers and 5 micro relays (SPDT). There are 2 bussed power studs. One for relays and one for fuses/breakers. This kit includes the block & cover, 30 x terminals, 30 x cable seals, 10 x cavity plugs and 2 x mounting brackets.

10 Minifuse/Circuit Breaker & 5 Relay Block Kit (with cables)

Part Number
PDMKIT003

Description

This block can be fitted with a combination of up to 10 Minifuses or mini-bladed breakers and 5 micro relays (SPDT). There are 2 bussed power studs. One for relays and one for fuses/breakers. This kit includes the block & cover, 30 x pre-terminated cables, 30 x butt connectors, 5 x jumpers, 10 x cavity plugs and 2 x mounting brackets.

Search these part numbers on our website for datasheets.

RTMR INTERNALLY BUSSED UNITS EXPLAINED

Fuse Bussed RTMR Units

The following RTMR units feature an internal fuse bus; 15305-1, 15305-2, 15305-3 & 15305-5. The internal fuse bus feeds power to all 10 fuses from a common input stud on the underside of the block. This reduces the number of terminals, cable seals, cavity plugs and wiring required to assemble the unit. It is also a great time saver. The only negative of using a common power bus is that you cannot power individual fuses from alternate power sources eg. 5 fuses powered directly from battery and 5 fuses powered from ignition power.

RTMR with internal Fuse Bus

RTMR without internal Fuse Bus

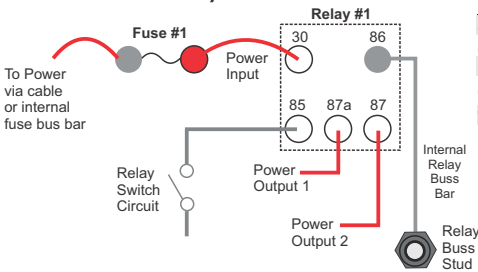

As you can see in these illustrations, the RTMR unit with no internal fuse bus requires an input power cable for every fuse, whereas the RTMR unit with an internal fuse bus only requires 1 power input cable.

Relay Bussed RTMR Units

The following RTMR units feature an internal relay bus; 15305-2, 15305-3 & 15305-6. The internal relay bus provides a common power or ground circuit to relay coil pin 86. There is a common misconception that relay pin 30 (common power) is connected to the relay bus. This is NOT the case. The reason why is that power to relay pin 30 should be supplied from a fuse to ensure that the accessory is fuse protected. So relay pin 30 should be connected to a fuse on the RTMR using a jumper cable.

RTMR with internal Relay Bus

Relay Pin	Description
85	Relay coil power
86	Relay coil power
30	Common power
87	Normally Open
87a	Normally Closed

Relay Circuit Diagram

As you can see in the above illustration, relay coil pin 86 is connected to the internal relay bus bar. Relay common pin 30 is connected to a fuse on the RTMR block using a jumper cable. Depending on how you wish to switch the relays, the relay buss stud can be connected to either positive or ground. However, if the relay is diode protected, it can only be used in one wiring configuration. Please refer to pages 12 & 13 which explain these different wiring methods.

Wiring Example 1.

15305-2 (Dual Buss) Fuse/Relay Block with relay coil powered by Relay Buss Stud.

15305-2 (Bottom View)

15305-2 Wiring Example (Bottom View).

Suitable Relays for this Circuit:

No Protection

Resistor Protection

Diode Protection
Anode to pin 85

When energizing the coil of a relay, polarity of the coil does not matter unless the relay is diode protected.

When a relay is diode protected, you must connect the positive voltage to the correct terminal of the relay coil as illustrated in the diagram.

Example Overview.

In this simple example we are switching lights on/off using a dash mounted light switch. The circuit is fuse protected (fuse #1) and power to the lights is switched by a normally open relay (relay #1).

How it Works.

When we switch the lights ON at the dash, power flows from the RELAY BUSS STUD into relay coil (pin 86) and out relay coil (pin 85) to GROUND via the lights switch on our dash. Powering the relay coil switches power fed by fuse #1 through a jumper cable to relay pin 30 to flow out relay pin 87 to the lights.

Notes.

Fuses and relays can be wired in any circuit configuration you like. The 15305-2 includes one internal buss for fuses and one internal buss for relays. This buss connects one terminal of each component (fuse / circuit breaker / relay) to the input stud, thereby reducing the amount of wiring that is required for each component.

Wiring Example 2.

15305-2 (Dual Buss) Fuse/Relay Block with relay coil grounded by Relay Buss Stud.

15305-2 (Bottom View)

15305-2 Wiring Example (Bottom View).

Suitable Relays for this Circuit:

No Protection

Resistor Protection

Diode Protection
Anode to pin 86

When energizing the coil of a relay, polarity of the coil does not matter unless the relay is diode protected.

When a relay is diode protected, you must connect the positive voltage to the correct terminal of the relay coil as illustrated in the diagram.

Example Overview.

In this simple example we are switching lights on/off using a dash mounted light switch. The circuit is fuse protected (fuse #1) and power to the lights is switched by a normally open relay (relay #1).

How it Works.

When we switch the lights ON at the dash, power flows from dash mounted lights switch into relay coil (pin 85) and back out relay coil (pin 86) to GROUND via RELAY BUSS STUD. Powering the relay coil switches power fed by fuse #1 through a jumper cable to relay pin 30 to flow out relay pin 87 to the lights.

Notes.

Fuses and relays can be wired in any circuit configuration you like. The 15305-2 includes one internal buss for fuses and one internal buss for relays. This buss connects one terminal of each component (fuse / circuit breaker / relay) to the input stud, thereby reducing the amount of wiring that is required for each component.

Using Flasher Relays in the RTMR.

Flasher relays are typically used to create the on/off flashing effect for turn signals and hazard lights. These relays can easily be installed in the RTMR. Only one flasher relay is required to create both a turn signal & hazard light circuit. There are however, a number of different ways a flasher relay can be wired. Regardless of the method you choose, it is recommended you do NOT use an RTMR that features internal relay bussing. The flasher relay can be installed in 2 different orientations, so please be mindful of this when designing your installation or replacing the relay.

Choosing which RTMR to use for the flasher circuit.

It is recommended you use 2 fuses for your flasher circuit. The first fuse is used to protect the turn signal circuit (which powers the turn signal lights on one side of the vehicle). The second fuse is used to protect the hazard light circuit (which powers the turn signal lights on both sides of the vehicle simultaneously). In most modern vehicles, the hazard lights will operate even if the ignition is OFF, however the turn signals will only operate when the ignition is switched ON. To achieve this functionality, we recommend you use the **15305-4 RTMR** with no internal bussing. However if you do not need this exact functionality, then you can also use the 15305-5 RTMR with internal fuse bussing.

Choosing which flasher to use.

Only flashers that feature ISO280 terminals can be used in the RTMR. We offer a range of flashers to suit the RTMR. When selecting the flasher, you need to consider the following;

1. Is the flasher powering LED turn signal lamps or conventional lamps?
2. Do you prefer a flasher with 3 or 4 terminals?
3. How many lamps will the flasher be operating?

Flasher Relays (LED lamps)

Selecting a Hazard Lights Switch.

Selecting a suitable hazard light switch is important, particularly if you wish to power the flasher circuit using 2 different fuses as recommended. The following switch can be wired to 2 different fuses and is suitable for use with both 3 and 4 terminal flashers.

Scan this QR Code for more information

QR Code: 9029

Hazard Lights Switch

PANEL CUT-OUT SCHEMATIC

Bussmann RTMR blocks can be mounted directly to a panel thereby eliminating the need for a bracket. Use the following template to cut a hole in the panel and fit the RTMR from behind the panel. The 4 fixing bolts are inserted to the front of the panel and screw into the threaded inserts of the RTMR to keep it in place. The cover can still be used as normal.

Recommended Panel Cut-Out (Scale 1:1)
